

Big Bell companies are blocking access to their networks and stopping competition before it can even begin for local, long-distance, the Internet, cell phone services, and new technologies like making calls over the Internet. If these mergers go through, only two companies will control 90 percent of the consumer market. These mergers would put the interests of large corporations over the interests of individual consumers, and your responsibility is, first and foremost, quality of service. In a world of increased competition, consumers could be enjoying unlimited local and long-distance telephone calls, as well as high-speed Internet access, for just \$40 -- \$15 for community Internet and \$25 for unlimited phone calls over the Internet. But today, this costs about \$90 more than double the price! The FCC should find that these mergers are not in the public interest and find new ways to bring down the costs of these services, particularly high-speed Internet which has become essential to modern life and is the gateway to exciting new technologies, like making phone calls on the Internet and streaming in video over the Internet. America is falling behind the rest of the world in broadband deployment. We are now 16th, far behind countries like Japan and Korea, which have opened up the building blocks of broadband phone and cable lines to competitors. This merger would only worsen these problems and therefore must be blocked. They would stifle competition, raise prices, and lead to fewer choices, making the problem worse, not better.
